

HOSPITALS BEWARE!

Bed Bugs in Suitcases

PATIENTS **CAN** BRING THESE PARASITES WITH THEM!

Protect your Sterile Environment with
BED BUG BATTALION'S 5 STEP HEAT TREATMENT
TO TERMINATE BED BUGS

1. DETECTION: Use Monitors to detect bed bugs in waiting rooms, lockers, break rooms, and other potential infestation areas.
2. LUGGAGE/FURNITURE PREPARATION: Remove heat sensitive items: makeup, toiletries, beverages, food, medication, and electronics. (See form for details.)
3. QUARANTINE BED BUGS: Once detected, place infested items into encasements to stop the spread of bed bugs.

Place suitcase in encasement

Place encasement over furniture, zip encasement
Set on dolly and transport to treatment area.

4. TEMPERATURE MANAGEMENT: Insert thermometers into encased item to measure the temperature.

5. Place encased suitcase/furniture in the Bed Bug Baker and heat to 122 Degrees Fahrenheit.

BENEFITS:

1. Terminate Bed Bugs before they infest Hospital.
2. Bed Bugs will expire without damaging your furniture or patient's clothing.
3. The heat penetrates infested items which terminates internal bed bugs.

♪ "Put your items in Bed Bug Baker, so you won't see bed bugs later." ♪
